color capabilities

Choosing a color that projects the right image for your business can be difficult. After all, color is the first thing that people see. It's an integral part of how they form their first impression of your business... and we all know how important this first impression can be.

Color Logic by Carboline is a system designed to help you make good decisions about color. Our color technology keeps pace with research and development. This means that you get the corrosion control you expect from Carboline along with a wide selection of intelligent color choices.

Using computer technology, every Carboline color carries a unique "fingerprint" which is kept on file, whether it is one of our standard colors or one of the thousands of custom color

matches requested each year. Like true fingerprints, no two colors are exactly the same, nor will they ever change. This identifying mark, combined with our dedication to strict color tolerances, assures "on-target" color matches every time. Whether it is a new order today or a re-order years from now, you can count on repeatable, consistent results from Carboline.

Carboline stocks a wide assortment of preformulated colors and maintains an extensive color library, a fraction of which appear in this brochure. Our Rapid Tint System (RTS) has formulations in place for many universal colors. This means fast turnaround to help keep your project on schedule and within budget.
