Formosa Plastics Olefins Exp

Area Coated: Exterior Coating

- First Coat: Pyrocrete 241

Project Description:

This expansion of the Olefins plant at Formosa Plastics in Point Comfort, TX required a 2 1/2 hour U.L. 1709 rating, which simulates a hydrocarbon type fire. A total of 120,000 sq ft of structural steel members and vessel skirts were fireproofed using Pyrocrete 241 by J.L. Manta, Inc. The fireproofing was applied in a boxed configuration by spray and trowelled smooth.

Additional Information:

1/2 inch or 1 inch, Pyrocrete provides longer protection than any other proprietary cementitious fireproofing material on the market.
