

MAY WINNER

# 70 Red Buckets of Surprises!

“ Team’s Coating Facilities was awarded a project that involved some parts for a historical bridge rebuild undertaking in the state of Florida. This job was through Lemke Industrial Machine who was awarded to fabricate and provided the necessary machining to the drawbridge parts. I was pleased to see that Carboline products were on my list of coating material choices from the Florida Department of Transportation (FDOT). The Carboline products chosen for the project were; Carbozinc 11 HS, Carboguard 893, Carbomastic 15 and Carbothane 133 LH.

Team’s Coating Facilities was able to be selected for this project because we are SSPC-QP3 certified which was a requirement by the FDOT for the coating process. Team was to provide the necessary surface preparation and coating application. This project was new to us since this was for a different type of industry than we normally serve.

I was busy submitting the mandatory documentation and procedures to the FDOT to ensure everything was compliant to meet the requirements. There was one item that I was unaware of but Carboline had my back. On my first order of coatings, Connie Dowling knowing the type of project, sent the coating certifications for the products with the order that I would need to submit with the rest of our records to the FDOT. Sending the certifications without my asking shows what a knowledgeable staff Carboline has to offer. This goes to show that it is always a pleasant experience to work with the Carboline Company past, present, and in the future with Team Industries. ”
