75 Red Buckets of Surprises!

“ Commerce Coating was contracted to assist a client with severe cracking and product leaks due to hydro-static pressure in a containment basin. Kyle Smith worked with us to develop a repair/coating system that worked great. After a thorough surface preparation and cleaning of the cracks in the concrete, we applied Carboline Reactamine Joint Sealant as a primary safeguard to mitigate the leaks. Then, a topcoat of Reactamine 760 HB was applied. ”
